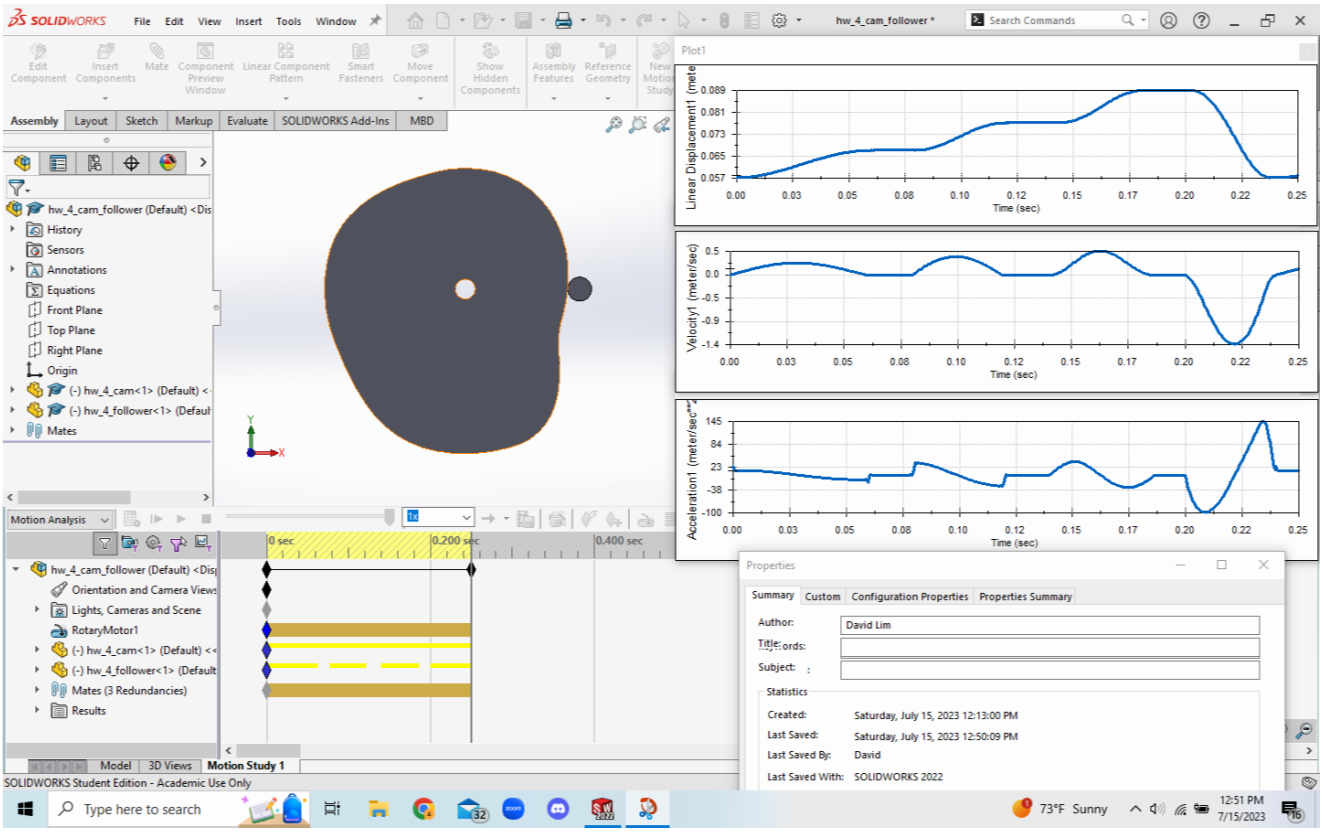
60 deg
120 deg
180 deg
240 deg
300 deg
Y axis (m)
X axis (m)
0.1
0
-0.1

Problem 2



The displacement, velocity, and acceleration plots are similar in shape to the plots generated in MATLAB from HW 3 problem 2a. Most of the numerical discrepancies are likely due to error in Solidwork's numerical method of calculating the plots. The most noticeable discrepancy is the accleration plot of the 3-4-5 polynomial fall, which has a noticeably skewed peak. This may be caused by imprecise calculation of the immedate transition from the fall to the first rise.

Problem 3
